ABSTRACT:

PROBLEM TO BE SOLVED: To obtain an original plate for a heat-sensitive lithographic **printing plate** capable of printing by directly mounting in a printer without developing after exposure and having an excellent plate life and scarce occurrence of scumming.

SOLUTION: The original plate for a heat-sensitive lithographic **printing plate** **comprises a hydrophilic** layer containing (1) **colloid** of an oxide or hydroxide of at least one element selected from a beryllium, magnesium, aluminum, silicon, titanium, boron, germanium, tin, zirconium, iron, vanadium, antimony and transition metals, (2) a **hydrophilic resin** and (3) a **photothermal** conversion agent on a **base** plate having an **ink** receiving surface or coated with an **ink** receiving layer.
